Statistical Process Control System

DIA SP C

DIA SP C collects various measurement data in the manufacturing process in real time, applies statistical methods and control rules, provides early warning of abnormal trends and monitors the manufacturing process in real time, stabilizes the manufacturing process to improve product quality, and complies with the IATF16949 international standard.

Alarms notify and ensure the stability of the process capability
- Various variable and attributed data, and control rules, effectively monitor the process capability to prevent abnormalities.
- Quickly find the stratifications that affect the quality, and we provide abnormality analysis of each stratification.
- There are 3 monitoring tools for users including Alarm Board, personalized monitoring dashboard, and plant-wide warning dashboard, to control abnormal quality events in real time.

PDCA management cycle used to continuously optimize production quality
- Users can import the excel file to build the basic setting data and measurement data quickly.
