ABOUT DELTA

Delta was founded in 1971 and has been the global leader in switching power supply solutions since 2002 and DC brushless fans since 2006. Delta offers some of the most energy efficient power products in the industry, including switching power supplies with efficient over 90%, telecom power with up to 98%, and PV inverters with up to 98.8% efficient. We have also developed the world's first server power supply certified as 80 Plus Titanium with over 96% efficient. We regularly invest around 8% of our annual sales revenues in R&D and have worldwide R&D facilities in Taiwan, China, Europe, India, Japan, Singapore, Thailand, and the U.S.

DELTA JOINS RE100

100% Renewable Electricity and Carbon Neutrality Targets for Its Global Operations by 2030.

RE100 °CLIMATE GROUP

2015

Commitments for "We Mean Business"

- · Science-based emissions reduction targets (SBT)
- · Climate change information in main reports (TCFD)
- · Responsible corporate engagement in climate policy

2018

Commitments for EV100

Scope:

Delta's major operation sites

Commitment:

- Expansion of EV charging facilities
- Switch to using EVs for company vehicles by 2030
- Incentives for employees and customers to use EVs

2021

Commitments for RE100

• Use 100% renewable electricity in global operations by 2030

Carbon Neutrality

 Achieve carbon neutrality by 2030

Race to Zero

· Signed business ambition to meet the 1.5°C target

FOCUSED ON SEVEN UN SUSTAINABLE DEVELOPMENT GOALS

State-of-the-art Grid Stabilization and Energy Control

Energy Storage Solutions

For the green energy transition and energy optimization

In the process of the energy transition, the increasing proportion of renewable energy sources supplying power to the grid means that the amount of generated power will be influenced by the weather, which presents problems for maintaining grid stability.

To improve grid stability and renewable energy utilization, smart grids must be developed and paired with energy storage systems to regulate and dispatch electricity efficiently.

Crucial Technology — Energy Storage Systems

Energy storage systems (ESSs) can control energy to enhance the reliability and energy through four critical technologies: energy management, power conditioning, battery management, and automation.

Energy Control and Dispatch

Energy Management

Power Conditioning **Battery** Management

Energy Storage Solutions

Delta provides energy storage solutions with one-stop manufacturing, integration and maintenance services by offering system design, power conditioning systems (PCS), battery energy storage systems (BESS), control systems, and energy management systems (EMS).

System Design and Simulation

- Service-life forecasting
- Optimal system configuration
- ROI calculations

Battery Energy Storage System

- LFP battery
- Outdoor cabinet and battery system

Power Conditioning System (PCS)

Control System

• 100 / 125 kW • 1 - 1.725 MW

• 1.8 - 2.8 MW

• 3.7 - 4.15 MW

- Data logger
- Bridge controller
- Gateway
- Network switch
- Internal UPS

Energy Management System (EMS)

- Enterprise/system dashboard
- Energy view & reporting
- Multi-site management
- Alarm, event logs

Engineering, Procurement, Construction (EPC)

- Power distribution unit (PDU)
- MV transformer
- Civil engineering
- Commissioning tests

Energy Storage Applications in Grid Operations

Renewable Power Plants

- Energy shifting
- PV smoothing

Generation

Distribution and Transmission

Consumption

Capacity firming

Conventional Power Plants

- Black start
- Backup
- Frequency regulation
- Automatic Generation Control

Distribution Grid

- Backup supply
- Ancillary services, including frequency regulation

Commercial Buildings and Factories

- Peak shaving
- Load shifting
- PV self-consumption
- Cost optimization
- Power backup
- Demand response

EV Charging Stations and Microgrids

- Peak shaving
- PV self-consumption
- Power backup

System

Architecture

AC Power DC Power Communication

Grid-Tied Applications

Applied to generator backup, grid ancillary services, energy shifting, and renewable energy smoothing.

Behind-the-Meter Applications

Applied to micro-grids, peak shaving, and PV self-consumption, power backup, and more.

Power Conditioning Systems

Power conditioning systems (PCSs) are bidirectional energy storage inverters for grid-tied and off-grid, for C&I and utility-scale applications. Their compactness saves space while offering scalability for various system configurations, as well as integrability with mainstream brand battery systems.

The Core to Control and Regulate Energy

Advanced Power Control

- P/Q control (active/reactive power)
- Frequency/voltage control

Modular Design Ensures High Availability

- Scalable to meet expansion needs
- N-1 redundancy systems

High Environmental Adaptability

- Outdoor protection: dust, water, salt spray, wind, snow and ice, vibration and shock
- Heat dissipation with air/liquid cooling

Dynamic Grid Support

- HVRT/LVRT
- FRT
- Anti-islanding

Selection Guide

UL version

⁴⁾ Standby loss measured under external power supply.

⁵⁾ Noise measured at a distance of 3 m.

Battery Energy Storage Systems

Delta's BESS offer a complete system design with features such as high energy density, battery management, multilevel safety protection, and outdoor cabinets with a modular design. Furthermore, it meets international standards used worldwide.

Ensure Safe, Highly-Adaptable, and Scalable Systems

LFP Battery

up to up to 315 kWh Outdoor cabinet

630 kWh Paralleled outdoor cabinets

2.5 MWh 8 cabinets

3.1 MWh 10 cabinets 4.4 MWh

14 cabinets

Scalable

Capacity

Multi-Level Safety

- Integrates PCS, grid controller communication, and system protection mechanisms
- · Diagnostics, monitoring and control with EMS

Battery System

- High-safety power circuit design
- Multiple environmental monitoring systems
- Multi-level BMS

Battery Cabinet

- SW: Cell monitoring, alarm, and protection
- · Safety: Anti-fire propagation, HVAC temperature control, auto fire suppression

- Thermal management, anti-propagation
- Integrated PCB to enhance reliability
- Multi-point temperature detection and protection design

- International safety certifications
- IEC 62619, UL1973, UN 38.3

Battery Cabinet Safety Design

Thermal Management

- Thermal management in cabinet
- HVAC in each cabinet to optimize cooling efficiency
- Airflow guide to improve temperature consistency

Fire Proofing

- Fire-resistant fiber covers the inner walls to prevent fire propagation
- Alarm mechanisms: smoke and thermal detectors
- Automatic fire suspension system

Protection Design

- Flood detector
- Aseismic structure for GR63 Zone-4

Battery Verification Laboratory

Delta's own battery verification lab was accredited by UL and DEKRA, and is qualified to verify the following standards to ensure the performance and reliability of our battery products.

CTF Stage 2: IEC 62619 and JIS C 8715-2 (S-mark)

DEKRA: IEC 62368-1:2014 and IEC 62619:2017

DeltaGrid® EM

for Energy Storage System

The DeltaGrid® EM energy management system is a forwardlooking digital platform that leverages novel AloT technologies for energy control, cybersecurity and reliability energy consumption optimization, utility ancillary services, distributed energy resource (DER) generation monitoring, reduction of carbon emissions tracking, and other applications.

Its control modes and AI algorithm can control energy flows precisely and automatically, thus optimising energy usage, maximizing system performance and making your energy systems greener and more economical. DeltaGrid® EM can be paired with the DeltaGrid® O&M digital services platform to upkeep energy assets, maximize uptime and increase operational efficiency.

System Design and Features

Advanced digital platform with up-to-date AloT, security, and reliability technology to protect your energy system and maximize system uptime, thus optimizing your operational efficiency.

Cyber Security

Reduce maintenance and transaction risks

- IEC 62443-4-1
- IEC 62443-3-3
- VLAN/VPN/TLS

Container-based Architecture

Rapid extension, deployment, and integration

- Single UI with support for optional application modules
- IoT Hub & Virtual Gateway
- Micro service framework

High Availability Redundancy

24/7 operation with self-detection and quick recovery

- Virtual Router Redundancy Protocol (VRRP)
- DeltaGrid IoT Hub

Network System Diagnostics

Nonstop operation and services

- Network communication status
- System operational status
- Monitoring of platform service status

System Architecture

Application Highlights

Optimized Energy Dispatching for Nanogrids

Energy Control

- Peak shaving, including flattening of EV charging peaks
- Load shifting
- Self-consumption optimization
- Power backup

Nanogrid Energy Management

- Real-time energy monitoring and control
- Integrated operation with renewable energy
- Special features to support EV charging infrastructure

Frequency Regulation and Utility Ancillary Services

Energy Control

- FP, PQ, VP, VQ, VPQ, PF modes
- Backup power

Management of Grid Ancillary Service Operation

Energy Trading

Renewable Energy Smoothing

Energy Control

- PV or wind smoothing
- Energy shifting
- Capacity firming

Multi-Site Management

- Real-time power generation
- Accumulative power generation
- Reporting

Single-Site Performance Management

- Day-by-day generation / sunlight monitoring
- Month-to-month comparison
- Predicted and actual power generation comparison

Remote Support with AR Capabilities

- Fast response with remote collaboration via mobile
- . Logging of critical data for precise diagnostics

Work Order Management

- . Repair status tracking
- Optimization scheduling
- Smart route planning

Digital Operation & Maintenance Services

Real-Time Device Management

- Remote access and OTA software updates
- Data collection

Predictive Maintenance

- Prescriptive maintenance
- Preventive maintenance

Inventory-Based Service Dispatching

- Customer information synchronization
- Spare parts tracking and procurement

Taipower Fengshan Green Community 500 kW / 1 MWh

Japan Sahamihara Micro-grid 500 kW / 880 kWh

Taiwan Success Case Highlights

Utility and Grid Support

Delta Taiwan Pingjhen Plant

• Grid Ancillary - regulation reserve • 5 MW / 3.6 MWh

Delta's 5 MW / 3.6 MWh ESS in the Delta Pingjhen Plant joined the Taipower Energy Trading Platform on November 1, 2021, providing auxiliary services to help regulate the grid frequency and stabilize the power grid.

Success Story

Utility and Grid Support

Taipower's Kinmen Xiaxing Power Plant

• Generator backup, frequency regulation, renewable energy smoothing • 2 MW / 1 MWh

Delta's ESS at Taipower's Kinmen Xiaxing Power Plant is a power dispatching tool for Kinmen's grid, designed to improve power supply stability. In daily operations, the system regulates the frequency of the power grid and renewable energy. When a generator trips, it can provide backup power to hold the grid within just 0.2 seconds.

Taipower's Lanyu Power Plant

• Peak shaving, frequency regulation, spinning reserve • 500 kW / 1.1 MWh

This ESS can regulate the power frequency to stabilize the independent power grid of Lanyu Island. During tourism booms, it can perform peak shaving to solve the problem of power supply bottlenecks. When the generator trips, it can also provide power to support the grid in just 0.2 seconds.

Solar Power Plant

Taipower's Kaohsiung Yongan Solar Power Plant

• PV smoothing • 1 MW / 1 MWh

The Kaohsiung Yongan PV Power Plant was built in 2011. It covers a total area of 9.45 hectares, has a PV capacity of 5 MW, and an overall annual power generation of about 6 million kWh. To improve PV power generation efficiency, Delta helped the Kaohsiung Yongan solar power plant build a 1MW/1.1MWh ESS. This ESS has improved PV power generation performance with PV smoothing and frequency regulation while reducing grid stress due to large fluctuations in renewable energy.

Success Story

Solar Power Plant

Changhua Coastal Park Solar Power Plant

• PV smoothing, demand response • 1.5 MW / 1.5 MWh

The 1.5 MW / 1.5 MWh ESS built by Delta in the Taiwan Changbin Solar Power Plant was accepted in December 2020. This was Delta's fourth megawatt-level ESS in Taiwan. It adopts a brand-new outdoor battery cabinet and PCS to regulate the solar power produced by the Changbin Solar Power Plant and eliminate intermittencies in renewable energy.

Japan Delta Ako Energy Park

• PV smoothing • 500 kW / 362 kWh

Commercial & Industrial Application

National Changhua University of Education

• Peak shaving, offgrid operation, power backup • 1 MW / 1 MWh

The 1 MW / 1 MWh ESS created by Delta's one-stop service (including investment benefit evaluation, customized solution planning, construction, orientation, and training) allows National Changhua University of Education to not only stabilize the grid and regulate electricity, but also to optimize contract capacity to reduce waste and minimize penalty charges while deepening academic research on micro-grids and intelligent energy.

Success Story

Commercial & Industrial Application

Cyntec Factory

• Backup power, demand response • 500 kW / 3 MWh

Delta provided a 500 kW / 3 MWh ESS for its subsidiary Cyntec's plant in Hsinchu Science Park. The system not only provides backup power for the plant, but it also supplies power to the plant through participating in Taipower's demand response program and avoids affecting Taipower's energy production.

Gravel in California, USA

• 500 kW / 880 kWh

Micro-Grid

CPC Corporation Chaiyi Gas Station

• Support E-Scooter charging, PV smoothing, load shifting • 250 kW / 500 kWh

Delta assisted CPC Corporation, a Taiwan leading energy resource provider, to build their first green energy demonstration station by retrofitting a Chiayi gas station into an e-scooter charging station by utilizing renewable energy generated by a rooftop solar system regulated by an ESS.

Success Story

Micro-Grid

Japan MHIET's Triple Hybrid Power Micro-Grid

• 500 kW / 250 kWh

Delta helped Mitsubishi Heavy Industries build a triple hybrid stand-alone power system, EBLOX, demonstrated in Sagamihara. The system adopts Delta's ESS and solar inverters, and combines them with a gas engine generator. It is environmentally friendly and meets the increasing demand for safe energy in the event of a disaster.

Taipower Fengshan Green Community

• 500 kW / 1 MWh
