## Dimensional drawing

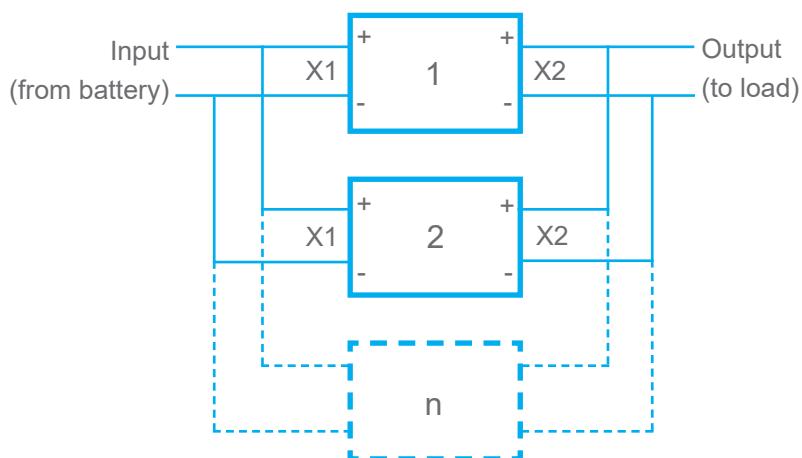

Dimensions in mm (inch)

## Mounting instructions

Make sure to install the DC-DC converter on a metal cooling surface, whose temperature should not exceed +70 °C (+158 °F). Use the provided gap pad between the DC-DC converter and the metal cooling surface in order to maintain good thermal contact. This avoids over heating of the DC-DC converter. Use M6 stainless steel screws with a minimum length of 12 mm and a maximum head diameter of 10.5 mm. The recommended torque is 4.6 Nm (40.7 in-lb). The correct torque should be established for each use case.

## Parallel operation

Two or more DC-DC converters can be connected in parallel. Droop current sharing method is adopted to aid current sharing but good current sharing is only possible with very similar output impedance and with the output voltages closely aligned. Current sharing suitability must be fully evaluated in the end-use application.
