

2023 Delta Electronics Responsible Minerals Report

Company Overview

By leveraging our core competence in power electronics, Delta has developed innovative technologies in both hardware and software based on the needs of our clients. We provide innovative, clean, energy-efficient solutions and system integration services while striving to promote our brand and enhance our corporate image. Delta has divided its operations into four business categories based on its business continuity strategy. These include “Power and Components”, “Transportation”, “Automation”, and “Infrastructure”. According to statistics from 2012 to 2023, Delta’s products and services have covered areas such as industrial automation and intelligent manufacturing, building automation, data center infrastructure, telecom power systems, intelligent monitoring and management systems, electric vehicle charging systems, and renewable energy. These efforts have resulted in approximately 45.5 billion kWh of electricity savings, reducing over 23.84 million tons of carbon dioxide, thereby assisting clients in saving operations costs, improving their global competitiveness, and contributing to the mitigation of global warming.

Delta Group Responsible Sourcing Policy | Conflict minerals due diligence

The Delta Responsible Sourcing Policy is to ensure that Delta's raw material procurement actions and decisions comply with the principles provided by the OECD Guidelines for Multinational Enterprises, International Labour Organization (ILO) Conventions, and the United Nations Global Compact (UNGC), including environmental protection, human rights and labor rights, transparent business relationships, fair competition, and supply chain due diligence. As an active participant in the global electronics industry supply chain, we support the Responsible Minerals Initiative (RMI) through practical actions to ensure that our mineral sources are responsible and ethically sourced.

Commitment

1. Pursue conflict-free minerals, rejecting products containing tantalum (Ta), tin (Sn), tungsten (W), gold (Au), cobalt (Co), and Mica from illegal mining areas in the Democratic Republic of Congo or neighboring countries.
2. Commit to not supporting or using minerals from conflict-affected and high-risk areas (CAHRAs) associated with armed conflicts, illegal mining, and poor working conditions.
3. We require the supply chain to use smelters verified by the Responsible Minerals Assurance Process (RMAP) as defined by RMI, and encourage upstream suppliers to promote qualified smelters to pass audits.

Implementation and Monitoring

1. Conduct supply chain due diligence based on the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas to ensure our products do not contain minerals sourced from the areas associated with armed conflicts, illegal mining, or poor working conditions.
2. We require suppliers to complete conflict minerals survey templates, including CMRT, EMRT, PRT, and provide relevant origin documentation. Suppliers should convey this policy to their upstream suppliers and supply chain, requiring upstream suppliers to comply jointly.

Management Process :

Responsible Minerals Due Diligence Result

Tungsten, tin, tantalum, gold, cobalt, and mica are essential for the functions of electronic products. To avoid the use of conflict minerals obtained from illegal operations, we have established the Responsible Mineral Procurement Policy and the Due Diligence Investigation on Conflict Minerals of Suppliers. Delta also organized webinars to communicate directly with suppliers and help them understand Delta's targets for joint implementation. In the due diligence investigations of suppliers, we disclosed and required suppliers to gradually shift purchases of minerals to qualified refineries. Delta will include mica, which has received more attention from stakeholders, in the scope of due diligence investigation.

We use the CMRT 6.31, EMRT 1.2 and PRT 1.1 template for conversion into online questionnaires and the most recently updated list of refineries announced by RMI for the overall assessment. According to the investigation, Delta's supply chain sourced materials from 278 refineries in 2023, including 278 which were included in the most recently updated list of qualified refineries. According to the analysis, most of the qualified refineries are located in Asia while others are located in Europe.

Metal

CMRT		EMRT	
Gold	92	Cobalt	49
Tin	67	Mica	4
Tungsten	32		
Tantalum	34
