

Delta WEEE Take-e-way Reports

2021-2024

End of Life Cycle E-waste

Delta tracking of WEEE generated from products sold. Delta's products are mainly sold to business partners in more than 70 countries on 7 continents. In 2023, Delta conducted a circular economy indicator inventory project to investigate the sales areas of products of each business unit and estimate the total weight of recycled waste products based on the e-waste recycling rate in the region. By leveraging the electronic waste recycling rates of these regions, they estimated the recycling rate of the products at disposal. According to the Global Transboundary E-waste Flows Monitor 2022 report by the United Nations, which provides statistics on electronic waste recycling rates across continents, it is estimated that approximately 15% of the weight of Delta's products sold in 2023 can be recycled or appropriately managed globally after disposal.

Delta fulfills its producer responsibility obligations under the EU WEEE framework through authorized compliance schemes to reuse/recycle WEEE. In this report, we disclose the amount of WEEE collected through takeback programs, based on the Take-e-way Reports for Germany, France, and the Netherlands from 2021 to 2024. The electronic waste recycling rates in these regions were used to estimate the recycling outcomes of the disposed products. According to the Global Transboundary E-waste Flows Monitor 2022 published by the United Nations, which provides statistics on e-waste recycling rates across continents, it is estimated that approximately 42% of the weight of Delta's products sold in Europe can be recycled or properly managed after disposal.

	2021	2022	2023	2024
Weight of products sold (kg)	87,969	470,653	430,919	471,955
Total weight of WEEE collected from takeback programs (Metric tons)	36.9	197.7	181.0	198.2
